SCULPTING A BEAUTIFUL BODY

FOR SOME PEOPLE DIET AND EXERCISE JUST WON'T SHIFT STUBBORN FAT. BUT NOW THERE'S A WAY TO SCULPT A DESIRABLE SHAPE.

With our warm, balmy weather and love of the outdoors the obsession to be fit, slim and healthy is becoming a national pastime. Yet for some people no amount of huffing and puffing at the gym and rigorous diets will remove fat from those stubborn areas such as the thighs or tummy. In fact, excessive exercise can lead to even larger thighs, calves yet smaller breasts.

Dr Kourosh Tavakoli offers a procedure to help shape a woman's figure using liposculpture and a combined breast augmentation. He says liposculpture is not just about weight reduction, but in the last 10 years has developed into more of an art form, sculpting beautiful body shapes.

With that in mind, surgeons such as Dr Tavakoli have refined the technique so superficial, instead of deep fat is removed. This allows the skin to move freely giving the surgeon the chance to achieve a more curvaceous look. Once the fat is removed it can then be injected into areas that need more shape and contour.

As part of his body shaping procedure Dr Tavakoli offers breast enhancement at the same time. "Breast enhancement is an integral part of body sculpting," he says. "A woman's breast shape must closely match the overall physique. "Liposculpture to hips, thighs and abdomen will have a profound effect on the perceived shape of the breasts that's why their shape and volume must match the liposculpted body at the same time."

Breast augmentation and breast lift are performed using gel implants.
